

Solid State Relays

Industrial, 1-Phase, 17.5mm with built-in varistor

'E' type connection

Types RGS..S343, RGS..S343DIN

- Zero cross switching AC solid state relay
- Rated operational voltage: Up to 660 VAC
- Rated operational current: up to 50 AAC
- I²t up to 1800A²s
- Control voltages: 4-32 VDC, 20-275 VAC (24-190 VDC)
- Design according to IEC/EN60947-4-3, IEC/EN62314, UL508, CSA22.2 No. 14-13
- Integrated over-voltage protection with varistor
- 100kA short circuit current rating according to UL508
- Option for DIN mounting (RGS...DIN)

Product Description

The RG...S343 is a variant from the RG family that is specially designed for LED switching applications.

The product platform of 17.5mm provides space savings in panels. The robust design of the RG family is adopted on this variant to ensure reliable operation through the product lifetime.

The RGS..DIN version provides solution for DIN mounting.

The RGS..S343.. solutions cater for loads from 0.5 AAC up to 50 AAC and a voltage of up to 660 VAC.

A green LED on the product indicates the presence of the control voltage.

Specifications are at a surrounding temperature of 25°C unless otherwise specified.

Series	Rated voltage	Control voltage	Rated current ¹ , Blocking voltage	Connection control	Connection power	Connection configuration	Special	Options
RGS1A: zero cross switching	60: 600 VAC +10% -15%	D: 4-32 VDC A: 20-275 VAC, 24-190 VDC	50: 50 A, 1200 Vp	K: Screw	K: Screw	E: Contactor	S343: Special design for LED switch- ing	DIN: DIN rail mount

1. Max. rated current with suitable heatsink. Refer to Heatsink Selection tables or derating curves in the case of the RGS..DIN

Note:

LED drivers from different manufacturers have different characteristics. The RG...S343 was tested and adopted to Philips Xitanium LED Drivers. In case of use with other drivers it is suggested that you contact your Carlo Gavazzi representative for recommendations.

Selection Guide - RGS..

Rated voltage, Blocking voltage, Switching mode	Control voltage	Connection control/ power	Max. rated operational current (I ² t value)
			50 AAC (1800 A²s)
600V, 1200Vp ZC	4-32VDC	Screw/Screw	RGS1A60D50KKES343
	20-275VAC, 24-190VDC	Screw/Screw	RGS1A60A50KKES343

Selection Guide - RGS..DIN (RGS for DIN Rail mounting)

Rated voltage, Blocking voltage, Switching mode	Control voltage	Connection control/ power	Rated operational current @ 40°C (I ² t value)
			12 AAC (1800 A²s)
600V, 1200Vp ZC	4-32VDC	Screw/Screw	RGS1A60D50KKES343DIN
	20-275VAC, 24-190VDC	Screw/Screw	RGS1A60A50KKES343DIN

Output Voltage Specifications

Operational voltage range	42-600 VAC, +10%, -15% on max
Blocking voltage	1200 Vp
Internal varistor	625V

General Specifications

Latching voltage (across L1-T1)	20V	Pollution degree	2 (non-conductive pollution with possibilities of condensation)
Operational frequency range	45 to 65Hz	Rated impulse withstand voltage, Uimp	6 kV (1.2/50µs) for Overvoltage Category III (fixed installations)
Power factor	> 0.9 @ Vrated	Isolation	
CE marking	Yes	Input to Output	4000Vrms
Touch protection	IP20	Input&Output to Case	4000Vrms
Control input status	continuously ON Green LED, when control input is applied

	- see filter information		

Filtering - IEC/EN 55011 Class A compliance (for class B compliance contact us)

Suggested filter for compliance

330 nF / 760 V / X1

Maximum Heater current

30 A

Note:

- Control input lines must be installed together to maintain products' susceptibility to Radio Frequency interference. Use of AC solid state relays may, according to the application and the load current, cause conducted radio interferences. Use of mains filters may be necessary for cases where the user must meet E.M.C requirements. The capacitor values given inside the filtering specification tables should be taken only as indications, the filter attenuation will depend on the final application.
- Performance Criteria 1: No degradation of performance or loss of function is allowed when the product is operated as intended.
- Performance Criteria 2: During the test, degradation of performance or partial loss of function is allowed. However when the test is complete the product should return operating as intended by itself.
- Performance Criteria 3: Temporary loss of function is allowed, provided the function can be restored by manual operation of the controls.

Heatsink temperature	100°C
Junction to case thermal resistance, R _{thjc}	<0.3 °C/W
Case to heatsink thermal resistance, R _{thcs} ⁵	< 0.25 °C/W

5: Thermal resistance case to heatsink values are applicable upon application of a fine layer of silicon based thermal paste HTS02S from Electrolube between SSR and heatsink.

Mounting Instructions

Thermal stress will reduce the lifetime of the SSR. Therefore it is necessary to select the appropriate heatsinks, taking into account the surrounding temperature, load current and the duty cycle.

A fine layer of thermally conductive silicone paste must be evenly applied to the back of the SSR. RGS should be mounted on the heatsink with two M5 x 30mm screws (SRWKITM5X30MM).

Gradually tighten each screw (alternating between the two) until both are tightened with a torque of 0.75 Nm. Then tighten both screws to their final mounting torque of 1.5 Nm.

In case of a thermal pad attached to the back of the SSR, no thermal paste is required. The RGS is gradually tightened (altering between the 2 screws) to a maximum torque of 1.5Nm.

Short Circuit Protection

Protection Co-ordination, Type 1 vs Type 2:

Type 1 protection implies that after a short circuit, the device under test will no longer be in a functioning state. In type 2 co-ordination the device under test will still be functional after the short circuit. In both cases, however the short circuit has to be interrupted. The fuse between enclosure and supply shall not open. The door or cover of the enclosure shall not be blown open. There shall be no damage to conductors of terminals and the conductors shall not separate from terminals. There shall be no breakage or cracking of insulating bases to the extent that the integrity of the mounting of live parts is impaired. Discharge of parts or any risk of fire shall not occur.

The product variants listed in the table hereunder are suitable for use on a circuit capable of delivering not more than 100,000A rms Symmetrical Amperes, 600Volts maximum when protected by fuses. Tests at 100,000A were performed with Class J, fast acting; please refer to the table below for maximum allowed ampere rating of the fuse. Use fuses only.

Class CC fuses are represented by tests performed on Class J fuses.

Co-ordination type 1 (UL 508)

Part No.	Prospective short circuit current [kArms]	Max. fuse size [A]	Class	Voltage [VAC]
RGS..50..	100	30	J or CC	max. 600

Co-ordination type 2 (IEC/EN 60947-4-3)

Part No.	Prospective short circuit current [kArms]	Ferraz Shawmut		Siba		Voltage [VAC]
		Max fuse size [A]	Part number	Max fuse size [A]	Part number
